Let us custom design a project management package for you!

Our project managers are highly qualified professionals, dedicated to maximizing the efficiency and effectiveness of the facilities we manage.

Professional and Technical Services

Energy Northwest provides a suite of professional and technical services to fulfill requirements for plant startup, operation, and plant outages. We consistently deliver excellence by performing high quality work to exacting specifications and with a clear focus on customer service.

Our technicians are experienced and well-trained, setting the standard for specialties such as:

- Operations
- Instrument and Control
- Electrical Systems
- Mechanical Systems
- NDE Services

Operations and Maintenance Programs

Energy Northwest brings this same level of expertise and commitment to the programs we design and implement for you.

A few examples of areas in which we can help improve performance and reliability include:

- Operations and/or Maintenance Assessments
- Operations and/or Maintenance Mentoring
- Work Control
- Scheduling
- Outage Planning and Implementation
- Corrective Action Programs
- Performance Trending
- Licensing
- Procedures

The depth of expertise.

Benchmarking Performance Assessments

Benchmarking and performance assessments are important tools for any organization that seeks performance improvements and continuous improvement programs through self-assessment.

Energy Northwest is an industry leader in these processes, and we apply this expertise and knowledge to a broad range of customer needs.

Assessments can be targeted to areas such as human performance, work processes, equipment reliability, or plant/station material condition. Our services are also available to assist management in the assessment of organizational effectiveness and the development of performance indicators to guide productivity decisions.

The commitment to quality.

Project Management

Energy Northwest has a proven track record of expertise and experience in providing project management for power plants in the Northwest. We currently provide project management for nuclear, hydroelectric, wind energy, landfill gas, and solar facilities. Our project management capabilities include:

- Compilation of Numerous Technical Services
- Budget Development and Administration
- Labor Management
- Facilitation Skills
- Environmental Services
- Licensing

The mission of public service.
