

**INTERAGENCY/INTER-LOCAL AGREEMENT NUMBER X-40656
BETWEEN
ENERGY NORTHWEST AND WASHINGTON STATE DEPARTMENT OF
TRANSPORTATION CO-LOCATION AND INDEMINITY AGREEMENT**

As provided under RCW Title 39, Chapter 39.34, this Co-Location and Indemnity Agreement (the "Agreement") is by and between Washington State Department of Transportation, a political subdivision of the State of Washington, with offices located at 310 Maple Park Avenue SE, Olympia, WA 98504-7300 (hereinafter referred to as "Customer" or "WSDOT"), and Energy Northwest, a municipal corporation and joint operating agency of the State of Washington and doing business by and through its Business Development Fund, with its principal office at 3000 George Washington Way, Richland, WA 99354 (hereinafter "Energy Northwest" or "EN").

WHEREAS, EN owns and/or manages a special use permit/communications use authorization between EN and the U.S. Forest Service (FS), known as and incorporated herein by reference as the Packwood Lake Communications Site Management Plan ("Communications Plan", signed September 25, 2012 (Exhibit A);

WHEREAS, EN is allowed to rent space in or on EN's communication site in accordance with the provisions of Communications Plan;

WHEREAS, WSDOT has a need to utilize space in or on EN's communication site to help fulfill the needs of the public to provide adequate communications, including but not limited to, emergency communications;

WHEREAS, EN finds it beneficial to protect its business interests to provide WSDOT with space in or on EN's communication site so that adequate communications can be provided to the public, of which EN is one.

NOW, THEREFORE, in consideration of the mutual covenants set forth herein and intending to be legally bound, the parties hereto agree as follows:

1. AUTHORITY AND PURPOSE

This Agreement is executed pursuant to Chapter 39.34 RCW as a cooperative endeavor of the Parties. The purpose of this Agreement is to establish a contractual relationship under which WSDOT will be permitted to locate, operate and maintain its own telecommunications equipment onsite at the Packwood Lake Hydroelectric Project and to set forth the Parties' respective rights, obligations, costs and liabilities for this undertaking. This Agreement shall be reasonably construed in furtherance of this purpose.

As authorized by the Communications Plan, EN shall permit the Customer to utilize certain portions of EN's communication site described as follows: Surge Tank located at the Packwood Lake Hydroelectric Project, hereafter referred to as "Premises." The legal description of the Surge Tank is:

Section 23, Township 13N, Range 9E, W.M.
Elevation of Tank Base - 2780 feet;
Elevation of Tank Top - 2915 feet;
North 46 degrees 36 minutes 8.3 seconds; West 121 degrees 38 minutes 8.0 seconds.

Specifically, the Customer has a nonexclusive right to utilize space on the Surge Tank and the Utility Building at the tank base, (hereafter referred to as "Co-Location Space") together with rights of ingress and egress to the premises over FS Road 1620, and the existing spur road to the premises, solely for the purposes set forth in Article 2. PERMITTED USES. The permission granted under this Agreement is in accordance with and subject to terms imposed in the Communications Plan, and shall not be construed to convey any right, title, or interest in the Premises. Further, Customer represents that the rights granted to it under this Agreement shall in no way hinder or impact any EN business operation.

2. PERMITTED USES

Customer is authorized to utilize said Premises for the purposes of locating, operating and maintaining its own telecommunications equipment in accordance with applicable laws, regulations and requirements, and the Communications Plan. Said Premises shall be utilized solely for such purpose(s) and for no other purpose. This Agreement constitutes the assignment by EN for the installation of personal property, owned or leased by Customer (collectively, the "Equipment") at the Premises. The FS may request EN or require a change to the initial configuration of Customer's antenna and supporting equipment with 60 days' notice to Customer; provided that such change (i) shall not unreasonably disturb or interfere with Customer's business operations and (ii) shall be at Customer' sole cost.

3. RESTRICTIONS ON USE

Customer, at its sole expense, shall cause the Co-Location Space and all aspects of its business operations and occupancy of the Co-Location Space to be continuously in compliance with all laws, ordinances, regulations, and the Communications Plan, now or hereinafter enacted concerning the Co-Location Space on the Premises.

4. ANNUAL TECHNICAL INSPECTION

Customer must validate their business name, contact information and type of use (i.e., private mobile radio service or non-commercial educational feed signal). Customer must perform an inspection annually by September 30 and document its inspection on the Inspection Checklist, a sample of which

is attached as Appendix D to the Communications Plan (Exhibit A). All of the information must be submitted to the EN authorized officer in order for EN to complete a certified statement to the USFS by October 15 of each year.

5. INSTALLATIONS/ALTERATIONS/IMPROVEMENTS

Any installations, alterations, improvements, or repairs made by Customer shall be at Customer's own expense and shall be done only at times and in conformity with plans and specifications approved in advance in writing by EN, by qualified staff of the Customer or a licensed contractor approved in advance in writing by EN, and in accordance with all laws, rules, regulations, ordinances and requirements of governmental agencies, offices and boards having jurisdiction. If requested by EN, Customer will post a bond or other security reasonably satisfactory to EN to protect EN against liens arising from work performed for Customer. All work performed shall be done in a good workmanlike manner and with material (when not specifically described in the specifications) of the quality and appearance customary in the trade for first-class construction of the type in which the Co-Location Space is located.

6. DURATION

The duration of this agreement, subject to its other provisions, shall be for five (5) years from its effective date or until terminated by either party herein.

7. FILING

This Agreement shall be effective only upon execution by the Parties and filing with the WSDOT Auditor and/or posting an electronic copy of the Agreement on the Parties' respective websites or other electronically retrievable public source in compliance with RCW 39.34.040.

8. CONSIDERATION

The Parties acknowledge that each Party receives a mutual benefit under this Agreement.

WSDOT is allowed to co-locate on or in EN's communication space in accordance with the requirements of the Communications Plan to provide a public service including but not limited to emergency communications. WSDOT will be responsible for the expenses associated with its own communication equipment, inspection, and maintenance.

In exchange, EN will receive the benefit of emergency communications at its Packwood Lake Hydroelectric Project. This is important for maintaining reliable power operations to WSDOT and the Pacific Northwest.

Attorney Fees. Any attorney fees, court costs, or other costs incurred by EN in collection of delinquent accounts associated with this Agreement shall be paid by WSDOT.

Taxes. WSDOT shall pay all state, local sales and use taxes, and leasehold excise taxes applicable to goods and services provided under this Agreement. EN shall include sales tax charges, separately identified, in the EN invoices to WSDOT.

9. INDEMNIFICATION AND LIABILITY

- 9.1 Indemnification. To the extent of its comparative liability, each party shall indemnify, defend, and hold the other party, its departments, elected and appointed officials, employees, and agents harmless from and against any and all claims, demands, damages, losses, actions, liabilities, costs, and expenses, including attorney's fees, for any bodily injury, sickness, disease, or death, or any damage or destruction of property, including the loss of use therefrom, which are alleged or proven to be caused in whole or in part by a negligent act or omission of the other party, its officials (elected or appointed), officers, directors, employees and agents.
- 9.2 Mutual Indemnity. If a claim, suit or action for injuries, death or damages as provided for in the preceding paragraph is caused by or results from the concurrent negligence of the Parties or their respective agents or employees, the indemnity provision shall be valid and enforceable only to the extent of the indemnitor's/indemnitee's negligence.
- 9.3 Industrial Insurance Act. The indemnification obligations contained in Section 9.1 shall not be limited by any worker's compensation, benefit or disability laws, and each indemnifying party hereby waives any immunity that said indemnifying party may have under the Washington Industrial Insurance Act, Title 51 RCW, and similar worker's compensation, benefit or disability laws. THE PARTIES ACKNOWLEDGE BY THEIR EXECUTION OF THIS AGREEMENT THAT EACH OF THE INDEMNIFICATION PROVISIONS OF THIS AGREEMENT (SPECIFICALLY INCLUDING BUT NOT LIMITED TO THOSE RELATING TO WORKER'S COMPENSATION BENEFITS AND LAWS) WERE SPECIFICALLY NEGOTIATED AND AGREED TO BY THE PARTIES.
- 9.4 Limitation of Liability. Except for the indemnifications set forth in Section 9.1, neither Party shall be liable for any special, indirect, consequential, lost profits, or punitive damages. The limitation of liability set forth herein is for any and all matters for which the Parties may otherwise have liability arising out of or in connection with this Agreement, whether the claim arises in contract, tort (negligence of whatever degree), strict liability, under any warranty, or under any other legal or equitable theory of law, of any nature arising at any time from any cause whatsoever.
- 9.5 WSDOT agrees to limit EN's liability to WSDOT for any damage on account of any error, omission or negligence to the amount of payment

received by EN from WSDOT for the particular service that gave rise to the claim and WSDOT shall indemnify and hold EN harmless for any amount in excess of the above agreed to limit. EN's cumulative liability to WSDOT under this Agreement is limited to the assets of the Business Development Fund of EN. Obligations of the EN Business Development Fund are not, nor shall they be construed as, general obligations of EN or other EN projects or funds.

10. INSURANCE

- 10.1 Each party shall secure and continuously carry in effect, with an insurance company or solvent risk pool, insurance/liability coverage as set forth in this Section 10.
- 10.2 Each party shall maintain insurance/liability coverage for bodily injury and property damage. Such insurance/liability coverage shall include provisions that such insurance is primary insurance with respect to the interest of each party, and that any insurance maintained by the party is excess and not contributory insurance with insurance required hereunder; and provisions to include broad form comprehensive liability and blanket contractual liability. Initial limits of liability for all required under this paragraph shall be \$1 Million (\$1,000,000) for each occurrence and \$2 Million (\$2,000,000) general aggregate. The parties agree that risk pool coverage that is equivalent to the values identified herein is satisfactory to meet the requirements of this section.
- 10.3 All coverage required hereunder shall not be canceled without thirty (30) days prior written notice to the other party.
- 10.4 Survival. Sections 9 and 10 shall survive the expiration or termination of this Agreement for any reason.

11. MISCELLANEOUS

- 11.1 Insecurity and Adequate Assurances. If reasonable grounds for insecurity arise with respect to WSDOT's ability to pay for the Services in a timely fashion, EN may demand in writing adequate assurances of WSDOT's ability to meet its payment obligations under this Agreement. Unless WSDOT provides the assurances in a reasonable time and manner acceptable to EN, in addition to any other rights and remedies available, EN may partially or totally suspend its performance while awaiting assurances, without liability to WSDOT.

- 11.2 Severability. Should any part of this Agreement for any reason be declared invalid, such decision shall not affect the validity of any remaining provisions, which remaining provisions shall remain in full force and effect as if this Agreement had been executed with the invalid portion thereof eliminated, and it is hereby declared the intention of the Parties that they would have executed the remaining portion of this Agreement without including any such part, parts, or portions which may, for any reason, be hereafter declared invalid. Any provision shall nevertheless remain in full force and effect in all other circumstances.
- 11.3 Waiver. Waiver or breach of this Agreement by either party shall not be considered a waiver of any other subsequent breach
- 11.4 Independent Contractor. EN is an independent contractor to WSDOT. No personnel furnished by EN shall be deemed under any circumstances to be the agent, employee or servant of WSDOT.
- 11.5 Termination. Any party shall have the right to terminate this Agreement with or without cause at any time during the initial or extended term of this Agreement by giving thirty (30) days' written notice of the termination to the other party by regular mail to the person identified in Section 11.6. Termination will be effective on the 31st day from the date the written notice was sent.
- 11.6 Notices. All notices or other communications hereunder shall be in writing and shall be deemed given when delivered to the address specified below or such other address as may be specified in a written notice in accordance with this Section.

If to EN:

Energy Northwest
Attn: Sherri Schwartz
Principal Contracting Officer
P. O. Box 968
Richland, WA 99352-0968
Telephone: (509) 372-5072

If to WSDOT:

WSDOT
Attn: ITS Communications &
Wireless Tech Manager
P.O. Box 47359
Olympia, WA 98504-7359
Telephone: (360)705-7028

Any party may, by notice given in accordance with this Section to the other Parties, designate another address or person or entity for receipt of notices hereunder.

- 11.7 Assignment. This Agreement is not assignable or transferable by either party without the written consent of the other party, which consent shall not be unreasonably withheld or delayed.

- 11.8 Disputes. EN and WSDOT recognize that disputes arising under this Agreement are best resolved at the working level by the Parties directly involved. Both Parties are encouraged to be imaginative in designing mechanism and procedures to resolve disputes at this level. Such efforts shall include the referral of any remaining issues in dispute to a higher authority within each participating party's organization for resolution. Failing resolution of conflicts at the organizational level, then the Parties may take other appropriate action subject to the other terms of this Agreement.
- 11.9 Section Headings. Title and headings of sections of this Agreement are for convenience of reference only and shall not affect the construction of any provision of this Agreement.
- 11.10 Representations. Counterparts. Each person executing this Agreement on behalf of a party hereto represents and warrants that such person is duly and validly authorized to do so on behalf of such party, with full right and authority to execute this Agreement and to bind such party with respect to all of its obligations hereunder.
- 11.11 Residuals. Nothing in this Agreement or elsewhere will prohibit or limit EN's ownership and use of ideas, concepts, know-how, methods, models, data, techniques, skill knowledge and experience that were used, developed or gained in connection with this Agreement. EN and WSDOT shall each have the right to use all data collected or generated under this Agreement.
- 11.12 Non-solicitation of Employees. During and for one (1) year after the term of this Agreement, WSDOT will not solicit the employment of EN's personnel without EN's prior written consent.
- 11.13 Cooperation. WSDOT will cooperate with EN in taking actions and executing documents, as appropriate, to achieve the objectives of this Agreement. WSDOT agrees that the EN's performance is dependent on WSDOT's timely and effective cooperation with EN. Accordingly, WSDOT acknowledges that any delay by WSDOT may result in EN being released from an obligation or scheduled deadline or in WSDOT having to pay extra fees for EN's agreement to meet a specific obligation or deadline despite the delay.
- 11.14 Governing Law and Interpretation. This Agreement will be governed by and construed in accordance with the laws of Washington, without regard to the principles of conflicts of law. Each Party agrees that any action arising out of or in connection with this Agreement shall be brought solely in courts of the State of Washington, in Benton County.

- 11.15 Entire Agreement; Survival. This Agreement, including any Exhibits, states the entire Agreement between the Parties and supersedes all previous contracts, proposals, oral or written, and all other communications between the Parties respecting the subject matter hereof, and supersedes any and all prior understandings, representations, warranties, agreements or contracts (whether oral or written) between WSDOT and EN respecting the subject matter hereof. This Agreement may only be amended by an agreement in writing executed by the Parties hereto.
- 11.16 Force Majeure. EN shall not be responsible for delays or failures (including any delay by EN to make progress in the prosecution of any Services) if such delay arises out of causes beyond its control. Such causes may include, but are not restricted to, acts of God or of the public enemy, fires, floods, epidemics, riots, quarantine restrictions, strikes, freight embargoes, earthquakes, electrical outages, computer or communications failures, and severe weather, and acts or omissions of subcontractors or third Parties.
- 11.17 Use By Third Parties. Work performed by EN pursuant to this Agreement are only for the purpose intended and may be misleading if used in another context. WSDOT agrees not to use any documents produced under this Agreement for anything other than the intended purpose without EN's written permission. This Agreement shall, therefore, not create any rights or benefits to Parties other than to WSDOT and EN.
- 11.18 Entity Status. This Agreement shall not require formation of any new governance entity. No property will be acquired or held, and no joint board or administrator is necessary to accomplish the purpose of this Agreement.
- 11.19 Records Retention. WSDOT shall, at its sole expense and in compliance with the Washington State Archivist's retention schedule, retain accurate books, records and original documentation originated under the Agreement, which information shall be freely disclosed to EN, its representatives, the Washington State Auditor, and the Bonneville Power Administration to permit verification of performance and EN's entitlement to payment under this Agreement, and to support any change requests, termination claims or any other claim submitted by EN. A copy of these records shall be available to EN upon request.

11.20 Public Records. In the event Public Record Act requests are received by either Party for records associated with this Agreement, the Parties shall cooperate for purposes of responding to such requests; provided, however, that nothing in this Agreement grants either Party thereto the authority to limit or otherwise control the other Party's responses under the Public Records Act. Instead, to the extent that coordinated responses cannot be achieved as contemplated herein, the disclosing Party shall provide written notice to the non-disclosing party of its intent to disclosure responsive records. Such notice shall be sufficiently advanced so as to allow the non-responding Party a meaningful opportunity to seek court intervention prior to release.

11.21 Non-Discrimination. The Parties agree not to discriminate in the performance of this Agreement on the basis of race, color, national origin, sex, age, religion, creed, marital status, disabled or Vietnam era veteran status, or the presence of any physical, mental, or sensory handicap.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the day and year last below written:

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

I. DEFINITIONS

Authorization Holder. An individual, business, organization, or an agency that has been issued a Communications Use Lease or Special Use Permit which allows occupancy, use, rights, or privileges of National Forest System (NFS) land.

Authorized Officer. The Forest Service employee with the delegated authority to issue and manage communications uses. The authorized officer is usually the District Ranger or Forest Supervisor of the unit on which the communications site is located.

Co-location. Installation of telecommunications equipment in or on an existing communications facility or other structure.

Communications Site. An area of NFS lands designated as an electronic site through the Forest Land and Resource Management planning process for telecommunications uses. A communications site may be limited to a single communications facility, but most often encompasses more than one. Each site is identified by name, usually denoting a local prominent landmark, such as Bald Mountain Communications Site.

Customer. An individual, business, organization, or an agency that operates telecommunication equipment within a facility, but does not broadcast or resell communications services to others.

Facility. A building, tower, or other physical improvement (buildings and towers do not have to be combined to be considered a facility) that is built or installed to house and support authorized communications equipment.

Facility Manager. The holder of a Forest Service communications use authorization who (1) owns a communications facility on NFS lands, (2) rents space in or on their facility to other communications users, but (3) does not own or operate their own communications equipment and they do not directly provide communications services to third parties. Persons or entities that manage or administer a communications facility on NFS lands for a facility owner or a facility manager are not facility managers for purposes of this Communications Site Management Plan.

Facility Owner. The holder of a Forest Service communications use authorization who (1) owns a communications facility on NFS lands, (2) may or may not be renting space or equipment to other communications users in or on their facility, and (3) owns and operates their own communications equipment in their facility.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Multiple-Use Facility. A communications site facility that has multiple communications uses operated directly by the facility owner or has customers or tenants in or on that facility.

Ranally Metro Area. Geographic areas in the United States identified by Rand McNally in its Commercial Atlas and Marketing Guide that define population centers of 50,000 or more. There are approximately 450 Ranally Metro Areas (RMAs) in the United States.

Senior Use. A communications use that predates another communications use. The most senior use or uses form the basis for the communications site designation.

Single-Use Facility. A communications site facility that contains only the single communications use of the facility owner and no tenants or customers in or on the facility.

Tenant. An individual, business, organization, or an agency that operates telecommunication equipment within a facility, for the purpose of broadcasting or reselling communications services to others.

II. NARRATIVE

A. Site Description

Packwood Lake Communications Site is located on the Cowlitz Valley Ranger District, Gifford Pinchot National Forest, Lewis County, State of Washington, in Section 23, T. 13 N., R. 9 E, Willamette Meridian, at approximately Latitude 46^o 36' 6.4" North, Longitude 121^o 38' 13.3" West. The elevation at Packwood Lake Communications Site is approximately 2724 feet above mean sea level (msl). The area for development is approximately 1.0 acres in size. Packwood Lake Communications Site is road accessible.

This site does not serve a Ranally Metro Area (RMA). The population is currently less than 25,000 and is therefore Zone 9. The population identified for this Zone is updated annually by the Forest Service, Washington Office, Director of Lands, and is used to determine the annual rental fee due the Forest Service.

The most senior use at this site is private mobile radio and low power broadcast translator and the site is designated as low power, including low power broadcast. This designation is consistent with the Gifford Pinchot National Forest Land and Resource Management Plan approved in 1990 within prescriptions which allow electronic sites. The maximum power output for the Packwood Lake Communications Site is based on the maximum output allowed for two-way radio under the Federal Communications Commission's rules at Title 47, Code of Federal Regulations, Part 90.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

B. Existing Site Development

Packwood Lake Communications Site was first developed for communications purposes in 2004 under a special use permit issued to Energy Northwest as a Facility Manager. Energy Northwest already had structures at this site under a FERC hydroelectric license. The site is the location of their surge tank on the power plant penstock. The surge tank is 150' tall and Energy Northwest allows antenna to be attached to the penstock and owns an equipment building at the base of the surge tank to house the radio equipment of Federal, State and local government radio repeaters and a broadcast translator for a educational non-commercial user.

See Appendix B for a current list of authorized facilities.

C. Objectives

The primary objectives of the Packwood Lake Communications Site Management Plan are to:

1. Document site management policy, procedures and standards, which are not already specified in the standard communications use authorization.
2. Manage for low power communications uses only. The maximum power output expressed as Effective Radiated Power (ERP) is typically based on height above average terrain (HAAT) to set the maximum radiated power levels allowed for two-way radio under the Federal Communications Commission's rules at Title 47, Code of Federal Regulations, Part 90. As of the 2003 regulation, Part 90 levels are limited to 500 watts ERP. Each use must operate at or below the power level authorized by their respective FCC license as long as it does not exceed the site limitation of 500 watts ERP. Cellular Mobile Data Service is exempt from this site ERP limitation as long as the use does not exceed the ERP limitations as described in the FCC regulations at Title 47, Code of Federal Regulations, Part 27, Subpart C. In addition, point to point microwave (FCC Part 101) is exempt from this site ERP limitation as long as non-occupational human radiation exposure levels are not exceeded by FCC regulation. Continuously transmitting use (other than FCC Part 101) shall be limited to 500 watts ERP.
3. All uses must be designed, operated and maintained so as not to physically or electronically interfere with the senior uses. If new uses deteriorate the receiving/transmitting operation of existing uses, the new uses may be required to institute at their expense; additional studies, equipment upgrades, frequency isolation, or physically separate themselves from the existing uses.
4. Present a program for operation within the site.
5. Help fulfill the public need for adequate communications sites.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

6. Protect the interests of authorization holders and site users by preserving a safe and an electronically "clean" environment.
7. Encourage the efficient development and use of space and facilities within the designated site, subject to the USFS goal to provide the best possible public service at a reasonable cost.
8. Authorize new Tenant and/or Customer uses that can physically and electronically be accommodated within existing buildings and/or towers.
9. Maintain visual resource objectives by requiring design standards that are unobtrusive and by utilizing earth tone colors and non-reflective surface material consistent with the standards in the Land and Resource Management Plan.
10. Amend this Communications Site Management Plan as necessary to be consistent with future Forest Land and Resource Management Plans. The Forest Service will provide authorization holders with proposed amendments to this plan and will allow a reasonable period of time for the holders to review and comment on the proposed changes.

III. AUTHORITY AND JURISDICTION

A. Authority

Forest Service authority to authorize and manage communications uses on National Forest System lands derives from the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1761-1771); Title 36, Code of Federal Regulations, part 251, subpart B (36 CFR 251, subpart B); Forest Service Manual (FSM) 2700; and Forest Service Handbook (FSH) 2709.11, chapter 90.

B. Jurisdiction

The Forest Service has jurisdiction over the use and occupancy of National Forest System (NFS) lands for communications purposes under the National Forest Management Act (NFMA) of 1976 (16 U.S.C. 1600 et seq.); the Federal Land Policy and Management Act (FLPMA) of 1976 (43 U.S.C. 1701 et seq.), and Title 36, Code of Federal Regulations, part 251, Subpart B (36 CFR part 251, subpart B).

The Federal Communications Commission (FCC) has jurisdiction over the use of non-Federal channels of radio and television transmission under licenses granted by the FCC. The National Telecommunications and Information Administration (NTIA) has jurisdiction over the use of Federal channels of radio transmission under authorizations granted by the NTIA.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

The issuance of an FCC license or NTIA authorization does not authorize the use and occupancy of NFS lands. A Forest Service special use authorization is required for the use and occupancy of NFS lands for communications purposes.

The Forest Service has jurisdiction over resolution of conflicts associated with the use and occupancy of NFS lands, such as those involving location and re-radiation. The FCC and NTIA are not responsible for resolving occupancy conflicts associated with the use and occupancy of NFS lands or the resolution of other conflicts when entities are operating within the limits of their FCC license or NTIA authorization. However, the FCC or the NTIA may be useful in assisting in the resolution of interference problems or other frequency conflicts.

IV. RIGHTS AND RESPONSIBILITIES

A. The Forest Service

The Forest Service retains the responsibility for issuing and amending authorizing instruments to Facility Owners and Facility Managers for the authorized improvements. The issuance of a FCC license (authorization), or frequency assignment, does not authorize occupancy of National Forest System lands. Granting occupancy and use of National Forest System lands rest exclusively with the Forest Service. This includes:

1. Amend or modify this site plan as deemed appropriate.
2. Approve new facilities, including those constructed within an authorization holder's authorized area.
3. Approve assignment of a communications site lease.

B. Facility Owners and Facility Managers Are Responsible for:

1. Complying with the terms and conditions of their communications site authorization and this site plan.
2. Ensuring that all new facilities, expansions, or improvements are consistent with the Gifford Pinchot National Forests Land and Resource Management Plan, environmental documentation and decisions affecting the use of this site, and the provisions of this site plan.
3. May rent building and tower space to tenants and customers without prior written approval from the Forest Service, as long as that tenant or customer use is an approved communications use as designated in this Communications Site Management Plan and does not interfere with other existing uses at the site. Form FS-2700-10, Technical Data for Communication Type Land Use, or equivalent information from prospective tenants or

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

customers seeking to co-locate in an existing communications facility may be required prior to colocation.

4. May not place any unreasonable restrictions on potential or existing tenants and customers.
5. Ensuring that facilities and equipment not complying with Federal, State, and local laws, regulations, and ordinances will be removed or modified within one year of approval of this site plan. Modifications require the pre-approval of the authorized officer.
6. Keeping all facilities within the established limits of their authorized area.
 7. The Facility owner or manager may not, for itself or for any customer or tenant, authorize construction of any equipment shelter or tower, or manipulation of the site or vegetation in any way, without specific authorization from the Forest Service (See sec. VII).
8. Providing the authorized officer the name, address, and telephone number of a local contact. The facility owner or the facility manager and the local contact person may be the same individual. The local contact shall be available for emergencies and shall have the authority to make decisions about construction issues, facility maintenance, and all equipment within the facility.
9. Ensuring that all communications facilities and equipment are properly installed, operated, and maintained in accordance with industry standards such as Motorola R-56. These standards may be waived by the Forest Service authorized officer when recommended by a site user association or similar technical committee or upon request of a facility owner/manager when equivalent measures would achieve similar results.
10. Providing to the authorized officer by October 15th of each year, a certified statement listing their type or types of communications uses they provide and the business names of all occupants and their type of communications use in the facility on September 30th of that year.
11. Treat and control noxious weeds on and adjacent to their permitted area, access, and parking areas. Treatment requirements and standards must be according to applicable regulations. Standards and application procedures may be obtained from the Forest Office.

C. Tenants and Customers:

May co-locate in an existing facility when their communications use is an approved use in the site plan. Co-location in a non-Federal communications facility does not require a

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Forest Service authorization. Tenants and customers who co-locate in a Federal facility shall first be issued a special use permit from the authorized officer before locating in that Federal facility.

V. USE OF SITE

A. Multiple-Use Facilities

Co-location, when practical, shall be required. Site applicants shall take the lead in this area and shall design their proposals to accommodate multiple uses of facilities and improvements. This includes the multiple-use of buildings, towers, solar generating systems, back-up generators, grounding systems, fuel containers, access ways, and parking areas.

Due to the limited development space at the site, new facilities or major modifications to existing facilities shall be designed to accommodate additional users even if other users are, or could be, competitors.

Facility owners and facility managers are not required to lease facility space to others if they can demonstrate to the authorized officer that:

1. Space is not available;
2. The use is incompatible with the existing communications uses at the site. For example, the proposed use is not compatible with other uses as provided for in FSH 2709.11, section 97, exhibit 05;
3. Additional space is needed by the facility owner or the facility manager; or
4. Additional users would compromise security of the facility or communications systems located in that facility.

VI. RENTAL FEES

Unless specified differently in the communications use authorization, the Forest Service shall charge facility owners and facility managers of non-Federal facilities and tenants and customers in Federal facilities an annual rental fee based on the fee schedule for communications uses on National Forest System lands contained in FSH 2709.11, section

95. The rental rates shall be adjusted annually using the Consumer Price Index-Urban (CPI-U), and the population figures are adjusted annually based on the most recent Rand McNally Commercial Atlas and Marking Guide (for RMAs) and Rand McNally Road Atlas for non-RMA communities.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Rental fees that facility owners and facility managers may charge their tenants and customers shall be:

1. Reasonable and commensurate with the use and occupancy of the facilities and services provide to tenants and customers; and
2. Consistent with other fees charged for similar facilities.

VII. CONDITIONS FOR NEW CONSTRUCTION AND MODIFICATION OR EXPANSION OF A FACILITY

A. New Construction, Modification, and Expansion Responsibilities

Construction space at the site is extremely limited and future additional facilities are very unlikely. If new facilities are proposed, or if existing facilities need modification, the following guidelines shall apply.

In addition to the responsibilities listed in Section IV, applicants, facility owners, and facility managers seeking to construct a new facility or modify or expand an existing facility are responsible for:

1. Submitting a complete application to the authorized officer prior to any new construction, modification, or expansion of a facility. The application shall include:
 - a. A copy of the approved site plan base map showing all of the proposed new, modified, or expanded facilities, including structures, towers, and auxiliary equipment;
 - b. Completed drawings or plans prepared by a professional engineer or architect;
 - c. Identification of any proposed point-to-point microwave paths, a plot of their azimuth, and their proposed elevation on the tower; and
 - d. Documentation showing that the proposed facilities will not obstruct or interfere with any exiting uses, including fixed point-to-point antennas, omni-directional broadcast antennas, or point-to-point microwave paths.
2. Demonstrating that the new facility will make the most efficient use of the limited amount of space at the site and will provide for future uses without additional construction.
3. Providing engineering and geotechnical investigations for development of specific foundation designs and grading plans.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

4. Providing an erosion control plan prior to construction. At a minimum, the erosion control plan shall include sediment control; stipulations that cut and fill slopes will be graded and contoured to prevent erosion and excessive runoff, and recommendations for temporary erosion control measures, such as netting, silt fences, swales, sediment collection areas, and so forth.
5. Coordinating with other Federal and local governments and securing all pertinent permits and approvals from those agencies.
6. Providing 30 days' notice to all facility owners and facility managers at the site, as well as the Forest Service, of all new frequencies, either for themselves or their tenants and customers, proposed for the site. A completed FS-270010 shall be sent with the 30 day notice to allow for comment of potential interference. If there is a reply to the request for comments that suggests that there may be physical interference, electronic incompatibility, or potential radio frequency interference to existing uses, the Facility Owner or Facility Manager must address those concerns with a sufficiently detailed response that the existing use will withdraw its objections to the new use or special

terms and conditions must be created to address those concerns. Copies of any response under this paragraph, positive or negative, must be provided to the Forest Service.

B. Construction Methods and Resource Protection

Plans submitted by a proponent, facility owner, or a facility manager for construction, modification, or expansion of a facility shall provide for soil rehabilitation measures, including soil replacement and stabilization and proper handling of runoff from buildings, parking areas, access roads, and undeveloped common areas. The authorized officer must approve all cutting or trimming of vegetation.

During construction, modification, or expansion of facilities, facility owners and facility managers shall:

1. Identify, avoid, and protect sensitive resource areas identified by the Forest Service.
2. Comply with the erosion control plan.
3. Notify the Forest Service authorized officer prior to commencing any approved ground-disturbing activities.
4. During construction and/or maintenance, paintbrushes will not be cleaned off on rocks. No marks of any kind, including survey marks, will be permitted on rocks.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

5. Minimize, to the greatest extent possible, ground disturbance and vegetation removal.
6. Re-vegetate extensive cut and fill slopes with native vegetation as soon as possible after construction. All re-vegetation must have prior written approval of the authorized officer.
7. Not cast off grading material. Excess soil can be used as fill material for roads, buildings and towers.
8. Obtain prior written approval of the authorized officer for temporary, on-site storage of construction materials.
9. Not leave hazardous materials, including fuels, oils, and lubricants unattended at the site at any time. Hazardous materials shall be removed from the site at the end of each workday or temporarily stored inside a locked and posted building until the following workday. Construction materials and supplies other than hazardous materials may be left unattended at the construction site at the end of each workday at the owner's risk.
10. Remove surplus construction materials and waste debris from the site no later than 30 days after construction has been completed.
11. To prevent the spread of noxious weeds into the area, power wash off any earth-moving or heavy equipment, such as dozers, graders, cranes, backhoes, and so forth before it is brought onto National Forest System lands.

C. Construction Inspection

1. All new construction, modification, and expansion of facilities shall conform to established technical standards and accepted engineering practices, such as the Uniform Building Code, Occupational Safety & Health Administration (OSHA), National Fire Protection Association (NFPA), National Electrical Code (NEC), Electronic Industries Alliance/Telecommunication Industries Association (EIA/TIA) codes and standards, and state regulations.
2. Any construction inspections required by other agencies are the responsibility of the holder. Copies of completed inspections shall be provided to the Authorized Officer, either as they occur or as part of the final as-built plan. Inspection information shall become a permanent part of the holder's special use file.
3. Corrective work required as a result of Forest Service or other agency inspections shall be completed by the date specified in the inspection report to the satisfaction of the inspecting official.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

4. A final set of as-built plans shall be submitted to the Authorized Officer within 90 days of acceptance of a structure (if the construction was contracted) or of its completion date (if the construction was not contracted).

D. New or Remodeled or Expanded Buildings

1. Any new buildings shall be designed to accommodate multiple users and shall be consistent with a site-specific environmental analysis conducted at the time of the proposal.
2. Building height will be restricted to a single story unless specifically authorized for two stories or with a snow vestibule. The roof shall be non-reflective metal or other non-reflective fire resistant material approved by the Forest Service. Roofs can be equipped with antenna support structures, such as poles and railings that can extend up to 25 feet above ground level.
3. Facility owners and facility managers are encouraged to construct the interior of their buildings in a modular fashion, so that they can:
 - a. Sublease sections to others;
 - b. Provide tenants and customers with internal separation and security;
 - c. Reduce physical interference; and
 - d. Increase management effectiveness.
4. The following materials are approved for construction of new buildings:
 - a. Floors: Concrete slab with drainage or as part of a non-flammable prefabricated structure.
 - b. Walls: Concrete block, metal, or pre-fabricated concrete.
 - c. Roofs: Concrete, corrosion resistant metal (if painted to eliminate shiny surfaces), or other fireproof material approved by the Forest Service. Proposals for wooden roofs will not be approved.
 - d. Partitions: Fire resistant material, such as reinforced concrete or properly grounded expanded metal.
 - e. Color: Color used on all exterior building surfaces must have prior written approval of the authorized officer. The goal of color selection is to make buildings as inconspicuous as possible when viewed from a distance. The intent is to reduce or eliminate glare from reflective

PACKWOOD COMMUNICATIONS MANAGEMENT PLAN

and/or illuminated surfaces such as windowpanes, sheeting and reflective paints. Non-reflective, Forest Service approved dark gray to green colors shall be used on equipment buildings.

- f. Building entry lights must:
 - i. Only light the immediate area in the vicinity of the door;
 - ii. Be motion-activated and have a limited time duration of 3 to 5 minutes; and
 - iii. Have a shielded beam that is pointed at the building door.

Requests for all-night (dusk-to-dawn) lighting or entry lighting that would be visible from outside the site will not be approved.

E. New or Remodeled / Expanded Towers

1. All construction, modification, and expansion of towers shall have the prior written approval of the authorized officer.
2. It is the applicant and holder's responsibility to ensure that new, modified, or expanded towers will not unduly interfere electronically or physically with any existing equipment at the site. Towers shall be spaced so as to prevent ground level radiation and interference problems. Compliance with these requirements shall be demonstrated in writing to the authorized officer prior to issuance of a lease, permit, or amendment.
3. All new towers shall comply with current structural and safety specifications and design standards, including safety-climbing devices. Towers should be as narrow and "open" as safety and structural integrity allow. New towers should be designed using maximum wind, snow, and tower loading anticipated for the site.
4. All new towers (including appurtenances) shall not exceed 150 feet. All new towers shall be self-supporting unless specifically authorized.
5. To avoid possible impacts to birds or bats, structures under this section must comply with the most current version of the U.S. Fish & Wildlife Service's Interim Guidelines on the Siting, Construction, Operation and Decommissioning of Communication Towers (available at <http://www.fws.gov/habitatconservation/communicationtowers.html>).
6. All towers shall be left unpainted if they are made of dull, galvanized steel. Paint is required only if the tower has a shiny or reflective surface. Non-

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

reflective, Forest Service approved dark gray to green colors will be approved unless the FAA requires red and white tower striping.

7. No lights, beacons, signs or strobes shall be allowed on new towers unless specifically required by the FCC/FAA.

VIII. GENERAL OPERATION AND MAINTENANCE

A. Special Environmental and/or Biological Considerations

There are no unique environmental or resource coordination requirements at this site. If issues arise in the future, this plan will be amended in accordance with the applicable decision or direction. (Note: Include considerations which have been identified in other approved documents and directly impact the comm site uses such construction closures for nesting or rearing of sensitive species, anti-perching devices, road closures, etc.)

B. Wiring and Grounding

1. All equipment shall be installed in metal cabinets or open frame equipment racks that are grounded and shielded. Grounding is to be installed in accordance with manufacturer's recommendations and accepted industry standards.
2. All building electrical wiring and grounding shall meet the NEC and applicable state and local codes. All permanent wiring shall be installed in metallic conduit and shall include a separate safety ground conductor. Metallic electrical metallic tubing (EMT) raceway in and of itself shall not be used as a ground return. Exception: If galvanized rigid conduit (GRC) is employed, it shall be acceptable for use as a ground return.
3. Every effort shall be made to protect the equipment from lightning damage. Lightning protectors should be used on all coaxial cable connections to equipment enclosures. Inert gas gap or metal oxide varistor (MOV), silicon avalanche diode (SAD), or Transient Voltage Surge Protectors (TVSS) should be used on all control, audio, and power lines. Failsafe modes shall be employed in the TVSS to protect wiring and shelter from fire damage. All TVSS equipment shall be UL1449 listed or approved.
4. All new building and/or tower structures shall have its own separate station ground mat system for all users in that site and solidly bonded (such as exothermic weld, not brazing) to the electrical service entrance grounding conductor or grounding electrode. Wherever practical, interconnection of individual station ground mats and/or the simultaneous placement of large sized copper ground wire with any new grounding systems that are buried on the site shall be encouraged.

5. Grounding shall be installed in accordance with accepted practices and standards, such as but not limited to, Motorola, Inc. "Standards and Guidelines for Communications Sites R-56 Issue B", and NEC Articles 250, 810, and 820. Ground enhancement materials using bentonite clay is currently the only approved method for chemical grounding. Other types of chemical grounding shall require completion of NEPA documentation by the applicant prior to consideration for approval by the authorized officer.

C . Communications Equipment

1. Equipment Ownership

All equipment shall be labeled with:

- a. The owner's name;
- b. Applicable transmitter frequencies;
- c. The applicable FCC license or NTIA authorization;
- d. Transmitting power outputs; and
- e. A current 24-hour telephone contact number.

2. Transmitting Equipment

All transmitters shall have protective devices

built into them or externally installed to prevent interference with other uses. All transmitters shall meet FCC/NTIA requirements and be FCC type accepted for use in the licensed (or license exempt) application.

The re-radiation of intercepted signals from any unprotected transmitter and its associated antenna system shall be prevented by the use of appropriate filters, typically bandpass filters, circulators (isolators), and/or 2nd harmonic filters.

The direct radiation of out-of-band emissions (noise or spurious harmonics) shall be reduced to a level such that it may not be identified as a source of interference as defined in FCC Regulations (47 CFR 90.209(e)). If site noise (electromagnetic noise) becomes an issue, noise threshold limits shall be established, and amended into the Site Plan.

All transmitters not in immediate use and not specifically designated as standby equipment shall be removed. Loads connected to circulators shall be capable of dissipating the total power output of the transmitter.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Where duplexing is used, a notch-type filter device by itself shall be avoided. In situations where a notch-type device is used, a bandpass filter shall be used on both the receiver and transmitter. Transmitter multi-channel hybrid combining equipment should be avoided unless additional protection is provided to ensure hybrid balance and minimize the chance for intermodulation products being produced. A post combining bandpass or lowpass filter is required after the basic hybrid combiner to block undesired 2nd harmonics from being radiated.

3. Receiving Equipment

A bandpass device, such as a cavity or crystal filter, is recommended at the input of all receiving devices. Cavity filters or other protective devices may be used at receiver inputs to reduce interference.

Where duplexing is used, a notch-type device should be avoided. In situations where a notch-type device is used, a bandpass filter shall be used on both the receiver and transmitter.

4. Antennas

- a. Microwave (dish) antennas and other than ground-mounted satellite dishes shall not exceed 2 feet in diameter, unless specifically authorized to meet path performance and reliability criteria.
- b. All antennas shall meet all OSHA safety standards. If an antenna is operating in excess of the Federal Communications Commission (FCC) public or occupations standards, steps will be taken, such as fencing, posting of signs, relocation, lowering power levels, within 24 hours to bring it into compliance. Ground measurements of Radio Frequency Radiation (RFR) levels will be taken before mitigation measures are implemented.
- c. Colors for dish antennas or covers shall be pre-approved by the authorized officer. White dish antennas and covers will not be approved. Existing white dishes and covers shall be repainted or replaced as repairs or replacement become necessary.
- d. Antennas shall be treated to reduce or eliminate reflected glare.
- e. Low-powered transmit and receive antennas may be located low on the tower or on the ground.

5. Interference

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

The responsibility for correcting interference problems lies with the holder of the communications site authorization for the facility, the user causing the interference, and the affected parties. Generally, the first users at a site have seniority with respect to resolution of interference complaints. Senior users have an obligation to maintain their equipment to current industry standards, to operate their systems in accordance with the terms of both the FCC license and the NTIA/Interdepartment Radio Advisory Committee (RAC) frequency authorization, and to comply with the Forest Service communications site authorization. New users at a site shall correct, at their expense, interference problems that they create. If it can be demonstrated that the senior user's equipment is at fault because of poor technical performance (does not meet, for instance, current Association of Public-Safety Communications Officials (APCO) or EINTIA technical standards for receiver performance), it will be necessary for the senior user to bring the poor performing receiving equipment up to current standards. The new user, in any event, shall cease operation of the suspect equipment until the problem is corrected, or as in the case of a poorly performing senior user receiver, the senior user must formulate an action plan for correcting the deficiency as soon as possible and be acceptable to both parties. If interference problems cannot be resolved or corrected within a reasonable time, the new use that is causing the interference may be terminated and the equipment removed.

If a Site Users Association is formed, all users shall cooperate with the Forest Service in the identification and correction of any interference. The Forest Service does not have any responsibility for correcting interference problems, but can act as a mediator to help all affected parties. Interference problems, whether theoretical, calculated, or measured (before and after licenses are granted) should be coordinated and resolved with the FCC or NTIA, as appropriate.

Interference with Public Safety, Critical Infrastructure, and any other emergency communications facility shall be corrected immediately. Operation of equipment covered by this site plan shall not interfere with Federal Government radio or electronic operations already in existence on NFS lands within two miles of the Packwood Lake Communications Site. The user causing this interference shall at their own expense take all actions necessary to prevent or eliminate the interference. If they do not eliminate the interference within ten (10) days after receipt of notice from the Forest Service to do so, their use will be terminated.

If electromagnetic noise becomes an issue, noise thresholds shall be established and incorporated as an amendment to this site plan. The cost of such analysis is the responsibility of the authorization holders.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

D. Cables and Transmission Lines

All new outdoor cabling shall be jacketed and 100 percent shielded and shall either be flexible or semi-rigid. Cables shall be properly installed, strapped, and fastened down. Cable runs should be consistent with applicable engineering standards when attaching cables onto a tower.

All transmission lines (including wave guide) shall be supported in accordance with manufacturer's specifications. Unjacketed transmission lines or unjacketed cables of any type are prohibited. No transmission lines shall be left unterminated. Lightning protection ground down conductors on towers shall be insulated from the tower steel and considered no different than transmission lines. Bonding of this down conductor to tower steel shall be done with NEC approved connectors that are also galvanically compatible (bronzed or tin plated) with the structural galvanized steel of the tower.

Double-shielded braided (98 percent or better) or solid-shielded cable shall be used inside of buildings. No RG-8 or RG-58 type class of cable is permitted. No connector-type adapters shall be used on transmission lines. Only correct connectors that will mate to connected devices may be used.

Conduits shall be shared as allowed for under the NEC when they service common areas and shall be buried where possible.

Existing cables and transmission lines that do not meet the above requirements shall be upgraded as repairs or replacement become necessary.

E. Radiation

All communications uses shall meet FCC, NTIA, and OSHA regulations, policy, guidelines, and standards concerning radiation limitations.

All antenna radiation zones shall meet all OSHA safety standards. If an antenna radiation zone is operating in excess of FCC public or occupational standards, steps will be taken, such as fencing, posting of signs, relocation, lowering of power levels, etc. within 24 hours to bring the zone into compliance. Ground measurements of RFR levels will be taken before mitigation measures are implemented. It is recommended that each Facility Owner or Manager, in accordance with FCC regulations 47 CFR sections 1.1307(b), 1.1310, and 2.1093, properly monitor Maximum Permissible Exposure (MPE) to electromagnetic fields for their site.

Monitoring radiation levels at the site is the responsibility of all site users and shall occur at intervals to comply with FCC regulations and guidelines. A copy of the monitoring report shall be provided to the Forest Service within 30 days of its completion.

Security fences with RFR notice signs are required around areas that exceed public use levels. All fencing location and design shall be pre-approved by the Forest Service.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Warning signs shall comply with American National Standards Institute (ANSI) C95.2 color, symbol, and content conventions. Contact information, including name and telephone number will also be included on warning signs.

Any identified RFR radiation problems that are, or could be, a public health hazard must be corrected within 24 hours after measurement tests have been completed or be removed from the site by the site user(s). If the proposed corrective action involves any new ground disturbance, it must be pre-approved by the Forest Service.

F. Utilities

Site users shall pay for the cost to install and maintain utilities, including any resource surveys and reports needed for environmental compliance. For visual reasons, new overhead utility poles are not authorized.

1. Commercial Electrical Power

Commercial power is provided by Energy Northwest.

2. Telephone Service

No commercial telephone lines service this site.

3. Fuel Storage

Fuel storage facilities on this site must be designed, installed and maintained according to applicable NFPA standards, federal, State and local laws and ordinances. All fuel storage tanks shall be grounded to the station ground mat.

If additional service is ever deemed necessary, a separate authorization will be issued to the owner of the service following the appropriate NEPA analysis and decision. The applicant must pay the cost of necessary resource surveys, and reports and construction costs including appropriate mitigation. For visual reason, overhead utility lines may not be authorized.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

G. Sanitary Facilities

No sanitation facilities exist at this site. If needed, any new sanitary facilities shall be pre-approved by the Forest Service. If it is determined by the authorized officer that the user needs such facilities, they will be provided by the applicant/holder in a manner and location satisfactory to the authorized officer and requirements of the local health department.

H. Security and Law Enforcement

The Washington State Patrol and Lewis County Sheriff's Department are the principal law enforcement agencies for the area in which the Packwood Lake Communications Site is located. Generally, the State Patrol and County Sheriff's are responsible for civil and criminal law enforcement. Generally, the Forest Service is responsible for enforcing Federal laws applicable to NFS lands, such as resource protection. Patrol and policing for security purposes is the holder's responsibility.

No facilities at the Packwood Lake Communications Site are fenced. If new fencing is ever deemed necessary for security purposes at other facilities on the site, it must meet the following criteria:

1. All fences must meet health and safety requirements.
2. All fence locations and design require Forest Service pre-approval.
3. The standard fencing type will be chain-link (i.e. cyclone).
4. The standard fence height will be eight (8) feet.
5. Fencing will be designed, maintained, and of a type to minimize interference issues. All fencing materials shall be hot-dip galvanized coated to minimize corrosion and dissimilar metal contacts.
6. Fencing shall be grounded at regular intervals not to exceed 20 feet to the station ground mat. The purpose of this requirement is to lower its conductivity to RF signals and shunt those RF signals to ground and prevent re-radiation.
7. Fences will be signed with RFR notices if RFR is above public levels.

Buildings shall be posted with a 24-hour contact phone number(s) on the main door(s) into the building where appropriate.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

I. Site Maintenance

The objectives of site maintenance are to present a clean, neat, and orderly appearance at the site and to have all the authorized improvements at the site be safe for workers and the public. All users are responsible for maintaining the overall appearance of the site.

Miscellaneous debris remaining after any construction or installation, removal or modification of equipment is not only a hazard but can cause interference or intermodulation problems. All loose debris must be removed from the site within 30 days after completing construction, reconstruction, or other activities. In particular, all loose wire or metal objects shall be removed from the site. The users of the site shall remove graffiti within ten working days of finding it. If graffiti is on natural features, such as rocks and trees, site users will remove graffiti using a method approved by the authorized officer.

Holders may not leave or dispose of trash, garbage, or cut brush on NFS lands. No outside trash or litter containers are allowed. Site users shall remove all trash and litter from the site as it is produced. Policing of litter in common areas, such as the areas between buildings and developed sites, is the shared responsibility of those holders bordering these areas.

Peeling paint on buildings and towers shall be re-painted within thirty days of discovery or as soon as possible as allowed by weather conditions.

J. Inspections

Unless waived in writing by the authorized officer, the holder shall have conducted annually a certified inspection of the facilities and equipment covered by the authorization. The inspection shall include a technical review that should ensure that all authorized equipment is operating in accordance with requirement of this site plan, the applicable FCC license or NTIA authorization, ANSI standards, and the manufacturer's specifications. In addition, the inspection should ensure that the authorized equipment is secure, free of rust, properly grounded, and otherwise properly operated and maintained. A copy of the inspection report, certified by a telecommunication specialist, shall be provided to the authorized officer within 30 days of completion of the inspection. The Forest Service may also conduct periodic reviews to monitor for authorization compliance.

K. Fire Prevention and Hazard Reduction Requirements

Facility owners and facility managers will be required to control vegetation within the fenced or immediate area around their facilities. Gravel/mineral soil (i.e. bare ground or mowed vegetation) must be maintained to a minimum of ten (10) feet clearance around buildings and a minimum of ten (10) feet clearance around any propane tank.

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Identified threatened, endangered, or sensitive plant species must remain within the minimum clearance areas.

Smoking is prohibited in flammable vegetation areas.

Roof structures shall be kept reasonably clear of debris at all times.

No explosives will be stored at this site. Flammable materials shall be stored in conformance with the requirements of local fire regulations. Flammables will be placed in closed containers and stored away from sources of ignition and combustible materials. If flammables are stored within a building, the building will be locked, properly signed and well ventilated.

Approved spark arresters will be required and maintained on all internal combustion engines.

At least one (1) U.L. rated 20 lb. A:B:C dry chemical fire extinguisher is required inside each building. Prior to each June, fire extinguisher(s) shall be inspected by holders and refilled, if necessary.

Any fire will be immediately reported to "911 ", the nearest Forest Service office and/or Lewis County Sheriff's Office.

Forest Service Officers will make periodic fire prevention inspections. They will call to the holder's attention any lack of compliance with the above regulations, plus any other existing hazards. Compliance with these inspections is required within the time limits specified in the inspection report.

All fire protection standards must be accomplished by the beginning of fire season unless otherwise agreed to, and then maintained throughout the fire season.

For new construction, the Forest Service will provide the Holder with a separate Construction Fire Plan which will be prepared at that time as applicable. State and local laws/regulations must be followed for the diesel tank installation.

L. Access

1. Road

Holders who damage the access road, or any of its associated improvements, such as ditches, culverts, roadside vegetation, signs, and underground utilities and facilities, shall be required to repair the road to conditions equal to or superior to those prior to any damage or disturbance.

Access to Packwood Lake Communications Site is from US Highway 12 at Packwood and then south on Synder Road for approximately 0.81 miles to the

PACKWOOD LAKE COMMUNICATIONS SITE MANAGEMENT PLAN

Forest boundary where the road becomes FR 1260. Follow FR 1206 for

approximately 4.1 miles to the surge tank which is on a short steep spur road on the right.

2. Internal Roads and Parking Areas

Internal roads and parking areas within the communications site are the responsibility of the site users. Interior roads and parking areas shall be planned and approved by the authorized officer in conjunction with establishment of new facilities. Interior roads shall be maintained so as to allow only one entrance to the site. The intent is to discourage off-road vehicle use in and around the site.

3. Road Closures

Forest Service roads are subject to periodic closures to entry during periods of extreme fire danger, inclement weather, or wetness. Site users may access the site during these closures if they have prior, written approval from the authorized officer.

IX. SITE ASSOCIATION AND ADVISORY GROUP

A site association is probably not needed at this time. If development were to increase, a users association may become desirable. Leadership would need to come from one of the users. As needed in the future, the site association would be responsible for obtaining and maintenance of an administrative access and upkeep of internal roads and parking areas. The site association would also be responsible for ensuring cooperation between users for on-tower access. A site safety officer would be identified within the site association. The site association would be expected to develop a Radio Frequency Radiation Plan/Agreement and recommend measures to reduce interference issues (e.g., through use of filters).

The goal of the site association would also be to maximize the effective use of the site. The objective of a sanctioned association will be to represent all site users as a group when dealing with the Forest Service on matters relating to the site administration. The association would be able to work in cooperation with the Forest Service to identify problems or opportunities and make recommendations to the Forest Service for any changes in management strategies at the site. The association could also provide input to the Forest Service regarding the future addition of equipment and facilities at the site. While the advice and recommendations of the association would not be binding on the Forest Service, the Forest Service could use the input for administration of the site. The Forest Service would be a member of such a group and would help jointly develop the charter (i.e., the ground rules).
