Energy Northwest offers industry expertise in project management and O&M services with a proven track record of project management for power plants and other industrial customers throughout the Northwest.

**PROJECT MANAGEMENT**

Energy Northwest offers industry expertise and excellence in project management. The staff of highly qualified professionals is dedicated to maximizing project efficiencies and effectiveness.

**OPERATIONS AND MAINTENANCE SERVICES**

The Energy Northwest Operations and Maintenance services team has an excellent record of maximizing operations performance and optimizing maintenance processes in industrial facilities.
POWER PLANT OPERATIONS AND MAINTENANCE

Energy Northwest professionals have more than 30 years experience and expertise in generating operations and maintenance energy generating projects.

As a power plant owner and operator, Energy Northwest understands the challenges of owning, operating and maintaining power plants. Helping clients provide the region with safe, reliable, cost-effective sources of power is a primary team commitment.

PROFESSIONAL AND TECHNICAL SERVICES

Energy Northwest’s professional and technical services staff offer support services for power plant start-up, operation and maintenance outages. The team delivers consistently outstanding results by focusing on customer needs while maintaining exacting performance standards.

EXPERTISE

The Operations and Maintenance services team can help improve performance and reliability in a variety of areas. They have specialized expertise in a broad range of power generating technologies including hydroelectric, wind, solar, landfill gas, biofuels, combustion turbines, thermal and steam plants.

The team offers:

- Operations and/or maintenance assessments
- Corrective action programs
- Operations and/or maintenance monitoring
- Outage planning and implementation
- Performance trending
- Licensing
- Procedure development
- Scheduling
- Work control

Energy Northwest’s technicians also offer expertise in the following disciplines:

- Combustion turbine operators
- Wind turbine operators
- Instrument and control technicians
- Electricians
- Mechanics
- Power plant maintenance technicians and engineers
- Non-destructive engineering services technicians
- Aggregated technical services
- Budget development and administration
- Environmental, licensing and contract administration
- Facilitation skills
- Labor management
- Predictive maintenance

ABOUT ENERGY NORTHWEST

Energy Northwest develops, owns and operates a diverse mix of electricity generating resources, including hydro, solar and wind projects - and the Northwest’s only commercial nuclear power plant. These projects provide enough reliable, affordable and environmentally responsible energy to power more than a million homes each year, and that electricity is provided at the cost of generation. As a Washington state joint operating agency, Energy Northwest comprises 27 public power member utilities from across the state serving more than 1.5 million ratepayers. The agency continually explores new generation projects to meet its members’ needs while offering a wide range of energy and business services and is a leading provider of professional and technical services for utilities and businesses. www.energy-northwest.com.
